NOTE: Fitting instructions show the installation of our Red Power Silencer however fitting is the same for the Serket Taper Silencer.

A) On the right side of the bike, remove the lower fairing bolt. This has a nut on the back so you will need to use a spanner as well as a allen key.

B) Remove the bolt from the upper part of the fairing.

C) Remove the upper bolt from the front panel.

D) Remove the 2 lower bolts from the front panel.

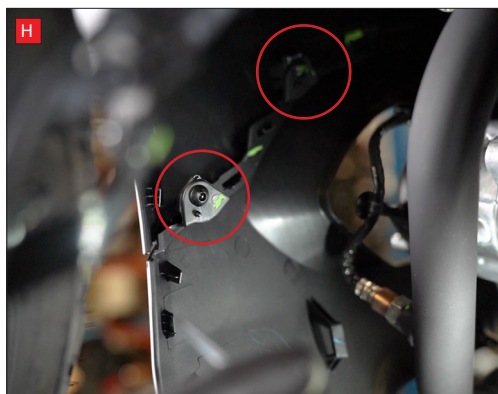

E) On the left side of the bike, remove the upper bolt from the front panel.

F) Remove the 2 push clips from underneath the front panel. These release by pushing the centre inwards.

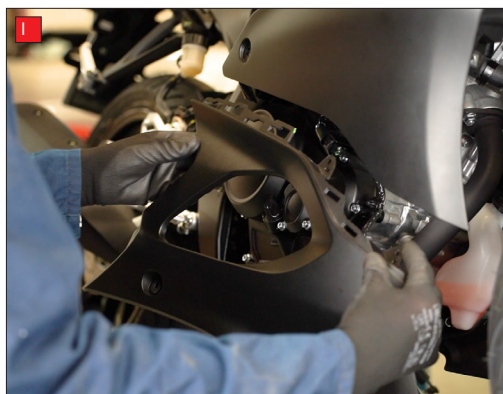

G) Release the clips that hold the fairings to the front panel then remove it from the bike.

H) On the right side of the bike, remove the 2 bolts that join the lower fairing to the upper fairing.

I) Carefully remove the lower fairing.

J) Remove both Lambda sensors from the original exhaust.

K) Remove the 2 header nuts.

L) Support the weight of the exhaust, then remove the silencer mounting bolt.

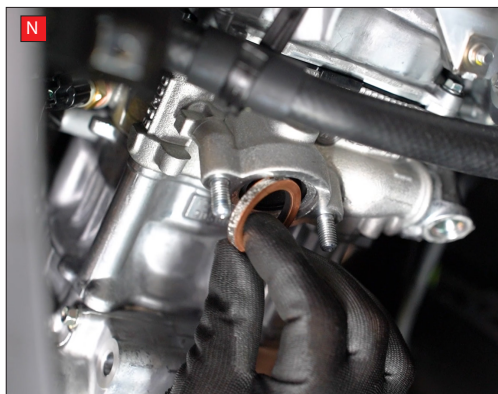

M) Carefully remove the original exhaust from the bike.

N) Remove the original gasket from the header port.

O) Fit the Scorpion header pipe to the bike and loosely secure in place with the original header nuts. Do not fully tighten, you will do that in a later step.

P) Slide the Scorpion connecting pipe and the clamp on to the header pipe.

Q) Slide the Scorpion silencer and flute (optional) onto the connecting pipe and align the silencer mounting bracket with the original mount on the bike.

NOTE: THE SCORPION SILENCER MOUNTS TO THE OUTSIDE OF THE FRAME UNLIKE THE ORIGINAL WHICH MOUNTED TO THE INSIDE.

R) Use the supplied spacer and mounting hardware to attach the silencer to the frame. Do not fully tighten yet, you will do this in a later step.

S) Fit the springs between the spring hoops.

T) Fully tighten the header nuts.

U) Fully tighten the clamp.

V) Fully tighten the silencer mounting bolt.

W) Fit both Lambda sensors to the Scorpion header pipe. The rear sensor should be fitted with the Lambda Catalyst and copper washer as per the diagram on the front page.

X) Re-fit the fairing and front panel. Installation steps are reverse of removal.

When fitted take bike for a short ride to ensure all functions are correct. When bike & exhaust are cool enough check all nuts and bolts are still secure.
